## SECURITY POLICY

The Red Deer Regional Airport Authority (RDRAA) is committed to implementing and maintaining an active Airport Security Program. As the Airport Operator, the RDRAA is responsible for the management, coordination, integration and implementation of the Airport Security Program.

Airport Security requires the participation and involvement of many stakeholders (the airport operator, NavCanada, air carriers, CATSA, police and tenants) all working in a collective partnership to ensure a holistic approach to Airport Security. Collaborative Airport Security is a benefit to all airport users and provides positive stakeholder and customer experiences.

RDRAA accepts a lead role in planning and coordinating security activities with all partners and stakeholders to promote a proactive, risk driven and multi-layered Airport Security Program. This approach enables RDRAA and the airport community to adapt to ever changing security threats, and ensures that an effective and efficient security posture is continually maintained.
