

SECURITY POLICY

Red Deer Regional Airport Authority (RDRAA) is committed to implementing and maintaining an active Airport Security Program. As the Airport Authority, RDRAA is responsible for the management, coordination, incorporation, and execution of the Airport Security Program.

Airport Security requires the participation and involvement of all stakeholders (the Airport Authority, NAV CANADA, air carriers, RCMP and tenants), all working in a partnership, to ensure a complete approach to Airport security. Joint Airport security is a benefit to all airport users and provides positive stakeholder and customer experiences.

Red Deer Regional Airport Authority accepts the principal role in planning and coordinating security activities with all partners and stakeholders to promote a proactive, risk-driven, and multi-layered Airport Security Program. This approach enables Red Deer Regional Airport Authority and the Airport community to adapt to constantly varying security threats and ensures that an effective and efficient security attitude is continually maintained.
